Water Energy Distributors, Inc.
2 Starwood Drive
Hampstead, NH 03841

How much do we love Water Energy Distributor's Geothermal HVAC system?

Let us count the ways:

- We are comfortably warm in the winter and cool in the summer.
- The system is quiet, very efficient, requiring only minor maintenance.
- It handles my basement, 1st & 2nd floors, a total of 3,600 sq. feet.
- The same well provides water for the geothermal HVAC system and for domestic use.
- There is no loss of geothermal efficiency with this system in contrast to others.
- I have no oil or gas to buy or be concerned about next to our lakeshore.
- Our 2009 electrical cost averaged out to \$235/month and that is for the entire house, lights, appliances, computers, printers, stereo AND the geothermal HVAC/water-heater system.
- Installed in 2007 we will have recovered the extra cost of its installation by 2014. After that it will be purely savings on electric costs. We have no oil, gas, water or sewer utilities.
- Wenzel Heating & Air Conditioning did a fantastic job of designing and installing the ductwork, water heater and heat exchanger. Their maintenance servicing is skilled and excellent.

We have a WOW!! System thanks to Water Energy Distributors, Inc. and their recommended installer, Bill Wenzel Heating & Air Conditioning, Inc.
